Research Design

For this study, the researchers will use a qualitative research design, specifically a phenomenological approach. This is because the study wants to know the actual experiences of the people in Brgy. Bahi who are having difficulty in getting food because of damaged roads and disasters. The study is not only about the problem itself, but also about what the people feel and what they do when they are in that situation.

According to Soheyila Ainehvand et al. (2019), disasters can affect roads and food systems, which can make food delivery more difficult. Also, Afshana Parven et al. (2022) said that environmental changes and disasters can affect people's livelihood and food availability, especially in places that depend on transportation. These studies are somehow related to what is happening in Brgy. Bahi, because people there also experience problems when the roads are damaged.

The researchers will choose participants who already experienced this kind of problem. They may be people who had difficulty travelling, buying food, or even meeting their everyday needs. The participants will be asked to share their own experiences and not just answer simple questions. Through the interview, the researchers can understand more about what they are going through and how they are able to handle it.

The purpose of this study is to know how road damage and disasters can affect the decisions and actions of the participants, especially when it comes in getting food. The phenomenological approach is fitted in this study because it focuses more on the personal experiences of the participants. The

researchers are planning to choose only three participants or family units so that the informations that will be gathered will be more detailed.

After all the data are gathered, the researchers will use thematic analysis. This means that they will find the common ideas, answers, and experiences of the participants. It can help the researchers understand the problem more better and maybe think of possible solutions that can help the community also.
