3. Abstract (*maximum of 250 words*)

4. Background

4.1. Rationale of the research

Green marketing is a valuable component of any business strategy, as consumers' interest in eco-friendly products has grown over time. One is that there is now much more public interest in and care for the environment. According to a report by the World Wildlife Fund (WWF), covering 54 nations with 80% of the world's population, the Economist Intelligence Unit (EIU) found that worry has increased by 16% and is still rising. Also known as "eco-wakening," it is prevalent in both high-income and, to a greater extent, underdeveloped nations. When it comes to green marketing, social media plays a significant role in promoting sustainable advertising and engaging with environmentally conscious consumers. Businesses have to show

their commitment to sustainability as one of the main aspects of green marketing. Digital marketing has transformed how businesses connect with their audiences, using various online strategies and tools to reach wider and more diverse groups of people. Among these platforms, Facebook stands out as a powerhouse. With more than 2.8 billion monthly users, it offers an unmatched opportunity for businesses and organizations to reach and engage individuals who care about environmental issues. Using social media is a powerful strategy to attract potential visitors. Creating engaging posts can highlight farm activities and guest experiences (The Farming Insider, 2025). Young farmers now use platforms like Facebook to share their stories, experiences, and knowledge with a wider audience. Through this kind of digital advertising, they help connect rural communities with people in the cities, encouraging more interest and understanding about agriculture. This positive online portrayal of farming can also spread to a larger audience (The Chicago Council on Global Affairs, 2023).

Meanwhile, in the Philippines, social media marketing has become a key strategy for businesses to boost their visibility, engage with customers, and increase sales. The country is known as one of the most active online, with millions of Filipinos spending hours each day on platforms like Facebook. The rise of mobile phone use and affordable internet has made this trend even stronger, turning social media into an essential tool for brands that want to grow in the local market. Research indicates that Filipino customers are very active with brands on social media, where influencer marketing, personalized content, and customer service increase brand exposure and loyalty (Allysa Marrie, 2024). Social media marketing plays an important role in improving brand visibility, customer interaction, and business sales. Although small businesses often face challenges such as lack of funds and technical expertise, they can still make the most of social media by posting regularly and creating engaging content. According to

Santos et al. (2024), this approach can help small businesses in rural areas, like those in Nueva Ecija, achieve sustainable growth. Furthermore, a study in Region I found that posts on platforms like Facebook are affordable ways to boost tourism promotion and engage audiences (Sanchez & Ramos, 2022).

Furthermore, Quezon Province continues to emerge as one of the rising tourism centers in CALABARZON, distinguished by its rich natural landscapes, cultural heritage, and expanding agritourism sector. In 2021, the province recorded more than two million tourist arrivals and had 37 DOT-accredited properties with a total of 1,533 rooms (Quezon Provincial Government, 2021). Within this growing landscape, the towns of Tayabas and Lucban have become well-known for their farm resorts, cultural attractions, and nature-based destinations that appeal to both local and domestic tourists. These farm resorts typically highlight rural experiences, farm-to-table dining, and eco-friendly environments that align with the increasing interest in sustainable tourism.

Although many farm resorts in Tayabas and Lucban utilize social media platforms for promotions, their marketing efforts tend to emphasize affordability, relaxation, leisure activities, and cultural ambiance. In recent years, Facebook has become a dominant platform for promoting local tourism, with posts, reviews, shares, and tags serving as influential forms of online engagement. Studies at the provincial level in Quezon indicate that tourists frequently rely on social media, particularly Facebook to search for information about destinations, accommodations, and activities (Consortia Academia, 2022). Positive mentions, shared photos, and online recommendations from satisfied visitors act as informal endorsements that significantly boost the visibility and credibility of local tourism establishments. For small and medium farm resorts, Facebook offers a cost-effective and accessible alternative to traditional

advertising, allowing them to broaden their reach beyond local boundaries. Consistent positive engagement on the platform can strengthen online reputation, build trust, and attract environmentally conscious travelers seeking authentic and sustainable experiences. Despite the widespread use of Facebook as a promotional tool, the effectiveness of the platform as a green marketing tool remains underexplored in the context of farm resorts in Tayabas and Lucban. This gap underscores the need to examine how Facebook can be maximized to showcase green initiatives and strengthen the positioning of farm resorts as eco-friendly destinations. Therefore, assessing the effectiveness of the Facebook app as a tool for green marketing is essential to help local farm resorts improve their visibility, promote sustainable practices, and attract a growing market of eco-conscious travelers.

4.2. Purpose of the research

The purpose of this study is to assess how effectively farm resorts in Tayabas and Lucban, Quezon use Facebook App for Green Marketing. It examines how online engagement, eco-friendly posts, and customer interactions shape public awareness and perception of their sustainable practices. It also aims to determine how Facebook App strengthens the resorts' visibility, credibility and overall marketing impact .

To achieve the purpose of the study, the following are the research questions:

1. What is the business profile of the farm resorts in Tayabas and Lucban, Quezon, in terms of:

- 1.1 Years of Establishment
- 1.2 Services Offered
- 1.3. Available Facilities
- 1.4. Green Marketing Initiatives

4.3. Theoretical Framework

Figure 1. Stimulus-Organism-Response

The SOR Model was proposed by Mehrabian and Russell in 1974 and is utilized to illustrate the cause-and-effect relationship between marketing activities and how consumers behave (Nurdiawan & Budiono, 2024). The research identifies Social Media Mentioning as the external Stimulus (S), which acts as the sustainable marketing strategy employed by the farm resorts. Research shows that social media plays a crucial role in advancing socially responsible marketing initiatives that engage consumer interest (Sarwar & Loureiro, 2025). This external input is subsequently processed by the Organism (O), which includes the internal

cognitive and emotional conditions of the consumer—particularly, the development of a positive brand image and the formation of trust. The research indicates that a robust green brand image can effectively reduce consumer perceptions of greenwashing (Liu & Tang, 2025), and regular exposure to social media fosters consumer trust and brand loyalty (Emerald Insight, 2022). This favorable internal state subsequently activates the final behavioral Response (R), which is the Tourist/Consumer Purchasing Intention. Consequently, the SOR model offers a comprehensive framework for illustrating how the social media stimulus leads to positive internal states that motivate purchasing intentions (Adetayo, 2022).

Figure 2. Uses and Gratifications Theory

The Uses and Gratifications Theory (UGT) was introduced by Katz, Blumler, and Gurevitch in the years 1973-1974 and complements other models by concentrating on the motivations behind consumers' interactions with social media. UGT perceives the audience as proactive and purpose-driven, selecting media to meet particular needs or the gratifications sought. In this research, consumers primarily interact with the farm resort's social media content for Informative and Entertainment gratifications (Zhang et al., 2024). They look for information on socially responsible practices to influence their perspectives, viewing ethically centered content as more informative, pertinent, and engaging (Shoenberger et al., 2025). The effective satisfaction of these needs (Gratifications Obtained) results in User Satisfaction, which is crucial for engagement and ultimately influences the Tourist/Consumer Purchasing Intention. This framework ensures that the study acknowledges the voluntary aspect of social media usage, reinforcing that the content must address the user's cognitive and emotional needs to effectively drive purchasing behavior.

4.4. Literature Survey

Farm resorts

Farm resorts, part of agritourism, have gained recognition as valuable options for sustainable tourism development. A review by Flanigan et al. (2020) showed that agritourism helps rural economies while preserving local culture, food traditions, and environmental resources. It also gives farmers alternative income sources and supports agricultural landscapes. Work by Bakhtiyor et al. (2024)

further supports this view, showing that agritourism improves rural livelihoods and promotes environmental education through direct interaction with farming activities.

Visitor experience is vital for the success of farm resorts as green tourism destinations. In a large-scale study with over 600 participants, Hsiao et al. (2024) found that intrinsic motivation, environmental behavior, and satisfaction significantly affect tourists' intention to revisit agritourism spots. Their results suggest that genuine, nature-based, and sustainable experiences impact both visitor satisfaction and loyalty. This is consistent with research by Hsu et al. (2020), which found that the alignment between a farm's branding (like "green" or "nature-based") and the actual experiences offered improves visitor satisfaction and enhances positive perceptions of the destination.

Green marketing strategies also influence tourist decisions regarding eco-friendly destinations. Wibowo and Sulistyani (2023) showed that green products and promotions significantly boost the intention to visit sustainable tourism locations. These results complement Nguyen et al. (2023), who studied how rural tourism experiences impact green consumption. They found that memorable rural experiences strengthen tourists' connection to nature, encouraging them to make environmentally responsible choices and supporting the growth of sustainable tourism.

Digital platforms significantly promote sustainability. Ghosh (2025) stressed that nature-based stories and green marketing messages on social media shape

tourists' views of eco-friendly destinations. Effective digital storytelling, which highlights natural landscapes, sustainable farming practices, or farm-to-table food, can create impressive images that attract environmentally aware visitors. This matches with Yilmaz (2024), who noted that sustainable agritourism marketing should include cultural authenticity and community involvement to enhance the socio-cultural aspects of sustainability.

According to Domondon (2024), a well-designed farm resort should integrate agricultural areas with accommodation facilities to provide an authentic farm-based experience. Moreover, the thesis emphasizes the use of neo-vernacular architecture to preserve local cultural identity and promote sustainability. This approach not only showcases traditional Filipino architecture but also encourages local community involvement by utilizing indigenous materials and methods. Meanwhile, such design considerations ensure that the resort remains environmentally friendly and culturally relevant, enhancing the overall experience for visitors who are increasingly seeking authentic and sustainable tourism destinations. The study demonstrated that incorporating local materials and traditional design elements enhances the attractiveness of the resort and encourages community participation in farm tourism. Furthermore, it revealed that resorts with a focus on cultural preservation are more likely to attract tourists who value experiential and eco-conscious travel, contributing to local economic development.

Furthermore, Herbas (n.d.), in Architectural Thesis of Farm Resort, noted that enough zoning within a farm resort, encompassing recreation areas, agricultural spaces, and accommodation zones, is vital for functional and sustainable operations. Additionally, by facilitating easy access and flow throughout the resort, good site planning guarantees visitors' comfort and contentment. Additionally, careful planning promotes the resort's long-term sustainability and lessens operational issues like congestion or wasteful resource use. The study emphasizes that creating a resort that is both aesthetically pleasing and useful requires striking a balance between usefulness, aesthetics, and environmental factors. The Study of Functional Zoning in Farm Resort Design (Herbas, n.d.) indicated that resorts with well defined zones and functional layout have higher guest satisfaction and better management of resources. Furthermore, it underlined that effective zoning promotes operational efficiency and provides a safer, more structured workplace for both workers and guests, ultimately contributing to a more sustainable tourism model.

In the study by Valencia, Cerio, and Biales (2022), Tourists' Motives and Activity Preferences to Farm Tourism Sites in the Philippines: Application of Push and Pull Theory, tourists were found to be attracted to farm resorts due to the natural environment, relaxation, and interactive farm-based activities. In addition, the study revealed that pull elements, such as the appeal of the farm setting and activities, have a higher influence on tourist motivation than push factors, indicating

that resort design must coincide with visitor expectations to enhance satisfaction. Moreover, the research noted that understanding tourists' preferences allows farm resorts to adjust their products, improve marketing techniques, and boost overall guest experience. Meanwhile, incorporating leisure, educational, and cultural activities within the resort can boost tourist involvement and promote repeat visits. Just like the Push and Pull Factors in Farm Tourism (Valencia, Cerio, & Biales, 2022) suggests that aligning resort design and services with visitor preferences increases tourist satisfaction and engagement, supporting sustainable tourism development. Furthermore, the study indicated that tourist motivation is influenced not only by physical environment and activities but also by service quality and cultural authenticity, highlighting the importance of holistic planning in farm resort development.

Moreover in the study of Farming for the Future: Assessing Sustainable Practices among Farm Tourism Sites in Bagabag, Nueva Vizcaya (Caoile, Ceria, Jacinto, Salome, & Covita, 2024), farm tourism sites in Bagabag implement a variety of sustainable practices such as organic farming, crop cycling, and community-based operations that support economic, environmental, and social sustainability. Additionally, the study discovered that these methods support the long-term viability and resilience of rural farms converted into tourism destinations while also encouraging food security, job creation, and community engagement. Meanwhile, the research reveals several problems fluctuating visitor numbers,

management issues, and environmental concerns demonstrating that while sustainable methods are desirable, good management and consistent tourist flow are crucial for long-term sustainability.

Facebook as Green Marketing Tool

Nowadays, most of the social media platforms have become crucial in helping brands build their marketing activities. A growing number of consumers are now interested in environmental protection in recent decades with the company strategies leading the way in embracing a more greener way of doing business. Moreover, a wide range of consumers are actively involved in social media advertising that has become a way of communication. Although previous studies have explored Facebook as a marketing tool, its role as a green marketing tool remains largely neglected. (Ktisti et al.,2022).

Facebook provides a wide range of features. Users can communicate with others, share videos, create groups or associations, and set up schedules together. Additionally, the Facebook marketplace is widely used for buying and selling. Using Facebook as a digital marketing tool can involve several strategies. These include advertising, sales promotions, publishing individual sales, and promoting products with visually appealing packaging (Piranda et al., 2022). In relation to this, the study of Sumit Kumar(2025) finds that facebook campaigns are increasingly becoming a significant medium for raising environmental awareness, particularly among the

youth and urban populations.

Business Profile of Farm Resorts

Farm tourism or also known as farm resorts is a form of tourism that combines agricultural activities with leisure and recreation. According to the study of Magdatu and Bacongus (2021), farm tourism sites commonly offers farm tours and agricultural activities, hands on experience such as harvesting or feeding animals. Knowledge sharing activities or educational experiences are mostly conducted through group and interpersonal approaches and mass media approach through the dissemination of agricultural technology which is central to all farm tourism operators. Similarly, the findings of Yamagishi et al.(2024) emphasizes that farm tourism enterprises diversify their services through accommodation, food services, and day and night tour packages.

The study of Yamagishi et al. (2024) also highlights the importance of physical infrastructure such as lodging, dining areas, and recreational spaces, which justifies the inclusion of facilities like guest rooms, function halls, swimming pools, and farm areas in evaluating the selected farm resorts. In addition, Chen et al. (2021) found that the quality and availability of facilities significantly influence visitor satisfaction. Identifying key facilities such as camping areas, play areas, and parking spaces.

In accordance with Hidalgo(2021), nature-based destinations such as farms may benefit from a shift to sustainable experience. Any event or occurrence in the farm that forms meaningful memories and creates an impact on caring for the environment and natural resources, including those who share it is described as a green farm experience. In relation to that, farm tourism in Quezon province utilizes their digital platforms to promote their services, supporting the inclusion of green marketing indicators such as social media posts, promotional content, and awareness campaigns(Orias & Borbon, 2022).

Utilization of Facebook in Digital Marketing

Social media engagement refers to the level of interaction that users have with online content, including likes, shares, comments, and saves. According to Mishnick and Wise (2024), engagement is a critical metric in evaluating the effectiveness of social media campaigns, as it reflects how audiences respond to and interact with content across platforms. Their study found that platforms like Facebook continue to generate substantial user interaction despite the emergence of newer platforms.

Furthermore, a study by De Vries et al. (2021) emphasized that the type of content significantly influences engagement levels. Their findings revealed that emotionally appealing and meaningful posts tend to generate higher numbers of likes, comments, and shares compared to purely informational content, highlighting the importance of relevance and emotional connection in audience interaction.

In addition, data reported by Dixon (2024) through Statista provides a broader perspective on engagement trends across major social media platforms. The report indicates that while Facebook's average engagement rate per post is relatively lower compared to platforms such as Instagram and TikTok, it remains a highly valuable marketing tool due to its extensive global user base and wide demographic reach. This suggests that even with lower engagement percentages, businesses can still achieve significant visibility and audience interaction because of the platform's scale. Furthermore, the report highlights that engagement levels may vary depending on factors such as content format, posting frequency, and audience targeting, emphasizing the need for strategic content planning. These findings reinforce the idea

that engagement should not be evaluated solely based on numerical rates, but also on the platform's ability to connect businesses with a large and diverse audience.

Putra et al. (2023) conducted a study on the effectiveness of social media as a digital marketing instrument, concluding that social media platforms significantly affect consumer behavior by offering accessible and interactive content. The researchers highlighted that websites such as Facebook encourage users to go beyond just interacting and execute things that can be measured, including clicking on links, looking at business pages, and looking for further information. This shows that social media is an important component of getting people to make the move, in particular when it involves visits to web pages and questions from customers.

Similarly, Adebayo et al. (2024) examined the influence of social media marketing on consumer behavior, finding that digital platforms significantly affect users' decision-making processes. The study showed that people are more likely to take action, such as exploring websites, asking questions, and considering making purchases, whenever they come across content online. The study showed that social media connects people who see information with people who actually act on it, which strengthens its role in conversion. Kumar and Nandhini (2024) also conducted a study on how social media marketing affects customer engagement and business performance. The researchers discovered that well-organized and informative content leads to deeper user engagement with a brand, frequently resulting in subsequent actions such as clicking links and reaching out to businesses. They concluded with the conclusion that content relevance and consistency are important factors that make users intend to make the move.

Moreover, in the study of Putra et al. (2023) showed that using social media for digital marketing makes businesses more able to find and reach more customers. The results showed that when users see posts that are interesting and useful, they are more probable to seek out what a business has to offer by visiting its website or reaching out to it directly. This shows that social media sites are good for more than just getting people to interact; they can also get individuals engaged.

Studies indicate that the success of agricultural businesses on social media relies on a "well-rounded blend" of content. By incorporating the "three E's"—educate, entertain, and e-commerce businesses can effectively draw in new followers and keep them engaged. Providing educational material such as information on farming techniques establishes credibility, while entertaining content like anecdotes about farm experiences creates an emotional bond. Maintaining a regular posting schedule is recognized as a crucial factor for keeping a brand "top of mind" for potential customers.

In the tourism sector, the growth of an audience largely hinges on user-generated content according to Teh, et al. (2023). Travelers love using social media to share their adventures, and this creates a genuine form of endorsement that can be incredibly influential. For farm resorts, it's a smart move to motivate guests to snap pictures and tag the location in which they essentially become brand ambassadors. This kind of social proof not only increases engagement from the guests' followers, but it also extends the resort's visibility to new audiences, all without the hefty price tag of traditional advertising methods. A study according to Jones, et al. (2021) states that examining small rural businesses revealed that targeted social media strategies, such as specific ad placements, can boost engagement metrics by over 50%.

By using consumer behavior models, rural businesses can convert followers from passive viewers into active contributors. The research emphasizes that for nature-oriented tourism, these digital tactics are transformative, enabling smaller, isolated organizations to connect with wider audiences that were previously unreachable through conventional marketing methods.

According to the study of Rusyani et. al (2021), eco-friendly initiatives greatly influence consumer awareness and sustainable purchasing behavior. The researchers found that individuals with higher environmental knowledge tend to develop stronger environmental concern, positive green attitudes, and a greater ability to make eco-conscious choices. These factors collectively encourage consumers to buy eco-friendly products. The study highlights that initiatives such as green marketing, eco-labeling, and environmental education effectively raise consumer awareness and promote long-term sustainable consumption by making people more responsible toward the environment.

In the study of Tamboli et.al (2023), it was found that consumers' awareness of sustainability strongly influences their preferences and purchasing behavior toward eco-friendly products. The researchers discovered that individuals who are more conscious of environmental issues tend to favor recyclable, biodegradable, and energy-efficient products. The study also highlighted that advertisements,

promotional campaigns, and government incentives significantly impact consumers' decisions to buy eco-friendly goods. Moreover, sustainability awareness has encouraged many consumers to modify their shopping habits to become more environmentally responsible. The authors concluded that improving sustainability education and applying transparent green marketing strategies can effectively raise consumer awareness and promote consistent eco-friendly consumption.

Ansu-Mensah (2021) explores how awareness of green products affects consumers' intentions to purchase environmentally friendly items, focusing on university students as the target group. The study found that students with greater knowledge and understanding of green products are more likely to develop positive attitudes and intentions toward sustainable consumption. It also emphasized that environmental education, marketing efforts, and social influence significantly shape consumer awareness and eco-friendly behavior. Overall, the research suggests that improving green product awareness can effectively promote responsible purchasing and encourage long-term environmental sustainability among young consumers.

4.5. Significance of the Research

This study aims to assess the effectiveness of green marketing practices for farm resorts in the municipalities of Tayabas and Lucban, Quezon. Specifically, it seeks to measure how well these resorts use Facebook to promote their eco-friendly initiatives. The findings of this study will benefit the following stakeholders:

Farm Resorts in Tayabas and Lucban. This study will help resort owners understand how effective Facebook is in promoting their sustainable practices. It will provide insights on how to improve their online content, increase audience engagement, and strengthen communication strategies to build awareness and interest among tourists.

Local Government Units (LGUs). The findings may help the municipal governments of Tayabas and Lucban see how Facebook can support nature-based and responsible tourism promotion. This can guide LGUs in encouraging resorts to actively share and highlight their environmental efforts online.

Future Researchers. This study can serve as a reference for researchers exploring Facebook-based green marketing, social media effectiveness, or sustainable tourism. It provides insights into how digital platforms can be leveraged

to communicate eco-friendly practices to a wider audience.

4.6. Statement of Desired Outcomes

This research seeks to provide a comprehensive understanding of the effectiveness of using Facebook to promote sustainable practices in resort businesses in Tayabas and Lucban, Quezon. It aims to examine how Facebook posts showcasing eco-friendly initiatives affect farm resort businesses in terms of marketing effectiveness, consumer awareness, and brand image. The study intends to generate evidence-based recommendations that entrepreneurs can apply to optimize Facebook for promoting their sustainable initiatives. Furthermore, it seeks to enrich academic discussions on digital marketing practices and serve as a reference for future studies on the relationship between Facebook-based promotion of sustainability, consumer behavior, and business growth.

4.7. Target Beneficiaries of Research Results

4.8. Definition of Terms

The following key terms are presented to help readers gain a clear understanding of this study. They relate to social media and Facebook digital marketing, tools commonly used by farm resorts to increase online visibility, strengthen communication with guests, and encourage environmentally responsible practices.

Content Relevance.How useful or important the resort's Facebook posts are, especially eco-friendly content.

Consumer Engagement. Likes, shares, comments, and mentions that show interest in a resort's eco-friendly initiatives are indicators of how engaged and engaged guests are with its online content.

Customer Perception. The way customers view or interpret a resort's image and credibility, particularly in relation to its environmental responsibility is communicated through social media mentions.

Engagement Level. How often or actively people interact with the resort's Facebook posts.

Facebook Application. A social media platform used by resorts to share content and promote eco-friendly practices.

4.9. Scope and Limitation of the Study

This study focuses on assessing the effectiveness of Facebook as a tool for green marketing for resort businesses in Tayabas and Lucban, Quezon. It will examine selected resorts in both municipalities that actively use Facebook to promote their eco-friendly practices and sustainable initiatives. Data will be gathered through surveys administered to two groups of respondents: resort owners and staff, and customers aged 18 and above who have either stayed at or engaged with these resorts online. The study aims to determine how exposure to Facebook posts as a green marketing tool influences eco-friendly branding, tourist awareness, perception, and intention to visit or book accommodations.

However, this study will not cover all aspects of green marketing or social media usage across the entire tourism sector of Quezon Province. It will specifically focus on the use of Facebook as a green marketing tool in resorts within Tayabas and Lucban. Other forms of digital marketing, such as Instagram, TikTok, paid advertisements, influencer campaigns, or website optimization, are beyond the scope of this research. Moreover, the findings will be based on data collected from the selected respondents during the study period and may not fully represent all resort businesses in the area.

5. Description of Method or Approach

5.1. Research Design/Research Instrument/Data Gathering Procedures

This study used a descriptive quantitative research design to evaluate how effectively Facebook promotes the environmental initiatives of resort businesses in Tayabas and Lucban, Quezon. This design allowed the researchers to describe and assess current Facebook-based green marketing practices without manipulating any variables.

A structured questionnaire served as the primary research instrument. It consisted of two parts: the first gathered information about the resorts' business profiles, including years of establishment, services offered, available facilities, social media presence, and green marketing initiatives. The second part measured the effectiveness of using Facebook to promote sustainable practices, using a four-point modified Likert scale ranging from 4 (Strongly Agree) to 1 (Strongly

Disagree). Research experts validated the questionnaire to ensure clarity, reliability, and appropriateness for the study.

Data were collected through surveys distributed or via Google Forms, after obtaining the necessary permissions from the resort management and the respondents.

5.2. Respondents/Units of Analysis/Subjects of the Study

The respondents of this study will consist of 100 individuals, including resort owners/employees and tourists who have visited or engaged with resort promotions in Tayabas and Lucban, Quezon. The number of respondents is based on the total number of active farm resort establishments in these municipalities that use social media for green marketing, as well as the need to gather sufficient data to represent both management and customer perspectives.

Respondents were selected because they are directly involved in managing, promoting, or interacting with resorts through Facebook, which is the platform examined in this study. The selection criteria include:

1. Resort owners or employees who actively use Facebook to promote their eco-friendly initiatives, and;

2. Tourists who have engaged with or responded to Facebook posts related to these resorts.

The unit of analysis in this study is each resort establishment, as the research focuses on their use of Facebook as a tool for promoting sustainable and eco-friendly practices.

5.3. Sampling Design and Procedures

The study will use a purposive sampling technique to select participants who are directly involved in using Facebook as a tool for promoting sustainable practices in farm resorts. Respondents will include resort owners, employees, and tourists. Tourists will be surveyed inside the resorts to ensure they have visited or interacted with the resorts and are familiar with how Facebook is used to showcase the resorts' eco-friendly initiatives.

Data will be gathered through a structured survey questionnaire designed to obtain information about the resorts' business profiles and their use of the app to promote sustainable practices.

Before data collection, a letter of permission will be sent to the concerned farm resort establishments to seek approval and cooperation. Upon approval, the researchers will administer questionnaires to resort owners and employees

personally, while tourists will complete the surveys on-site inside the resorts. Online distribution via Google Forms may also be used for convenience if necessary.

All collected responses will be organized, tallied, and analyzed, and all information will be treated with confidentiality and used solely for academic purposes.

5.4. Research Locale/Study Site

The study will be conducted in Lucban and Tayabas, Quezon, municipalities known for their natural attractions and scenic landscapes. Farm resorts in both municipalities will serve as the primary focus of the study to understand how Facebook can be used as a tool for promoting sustainable practices and reaching a wider audience.

5.5. Assumptions or hypotheses

Ho: There is no significant difference in the level of effectiveness of Facebook as a tool for green marketing among farm resorts in the selected municipalities of Quezon Province.

The research conducted by Singh and Jassi (2023) highlights that statistics is a valuable tool for data analysis, enabling researchers to make generalizations about a broader population based on collected sample data. In this study, a quantitative data analysis approach will be applied to evaluate how farm resorts in Lucban and Tayabas, Quezon use Facebook as a tool for promoting sustainable practices. The analysis will follow descriptive statistics.

Descriptive statistics will be used to summarize and present the characteristics of the data. This includes computing frequency and percentage to describe the business profile of the farm resorts in terms of years of establishment, services offered, available facilities, social media presence, and green marketing initiatives. Weighted mean and standard deviation will be utilized to assess the level of effectiveness of Facebook in promoting sustainable practices and to measure the level of tourist exposure to Facebook posts about the resorts' eco-friendly initiatives in terms of frequency of exposure, engagement level, and content relevance.

To make the results easier to understand, tables, graphs, and charts will be used to present the summarized findings visually. This analysis will provide a clear overview of how effectively farm resorts in Lucban and Tayabas use Facebook as a tool for green marketing. The results of the descriptive analysis will serve as the basis for interpreting the extent of awareness, implementation, and effectiveness of Facebook in promoting sustainable practices and enhancing resort visibility in the

This conceptual framework illustrates the relationship between the tourist awareness and marketing effectiveness among local farm resorts. . It emphasizes that consistent and strategic engagement through Facebook Application can enhance the visibility, reputation, and image of farm resort businesses. When customers share positive online experiences or eco-friendly initiatives of resorts, these interactions contribute to increasing public awareness and trust. In turn, this heightened awareness leads to stronger marketing outcomes, such as improved customer reach, brand loyalty, and competitiveness in the tourism industry. Ultimately, the framework highlights that social media serves not only as a communication and promotional channel but also as a vital and effective green marketing tool that supports sustainable tourism development and environmentally responsible practices among local farm resorts.
