RESEARCH AND DEVELOPMENT CENTER CAPSULE PROPOSAL FORM College of _____

Proponents			
Last Name	First Name	MI	Signature
Field of Specialization	< This will describe what specific specialization your topic such as Criminal Justice Education, Human Resource Management, Food and Beverage, Accounting Management and the like>		
Research Design	<The kind of research you are undergoing, descriptive research, phenomenological, correlational, experimental and the like>		
Research Topic	< Specific topic based from the proposed title of the study>		
Working Title: (as proposed by the proponent)	<Your Proposed title to be defended>		
Approved Title: (as redirected by the research consultant)	<This will be given by the panel>		
References (APA Style)	< See Separate page for the guidelines>		
Theoretical/Conceptual Framework	< Theoretical framework in a study is based on an existing theory or theories (e.g., a theory of motivation). The conceptual framework, on the other hand, is something you can develop yourself based on this theory.>		
Review of Literature (Synoptic and Argumentative)	<The literature review lays the foundation of the research study. It gives the information necessary for the researcher to be guided in the completion of the study.> <This chapter will review, summarize and evaluate studies and literature so that the main idea that will be extracted can guide the researchers.> <This serves as the guiding star for the researchers to come up		

	with the idea to undergo the processes in the present investigation. Comparison and contrast are necessary for this chapter.> <This chapter is not just to list down the authors and their study rather the synthesis of all the studies should be done to show that there is really a knowledge gap to support that the present study is necessary to be conducted.> <Logical (thematic) presentation is to be noted here in this chapter. Theme should be based from the variables of the study> <Like any other chapter, the literature review should have its own introduction.> <The literature review should coincide with the list of reference and to the literature matrix of the study.> <Synthesis of all the related literature should be presented in the last paragraph looking into the differences and the similarities of the literature review presented in this chapter.>
Research Questions/ Objective	<This portion should state clearly the problem of the study in general and in specific. This is usually stated in a question form.> <Statute clearly what you want to investigate and accomplish so that it illuminates the problem of the study.> <It should specify the intention of the study so that it will contribute into the resolution of the problem. In other manner, the problem is the purpose of the study.>
Significance of the Proposed Study	<It should specify the intention of the study so that it will contribute into the resolution of the problem. In other manner, the problem is the purpose of the study. It indicates the value that will be derived from the study. The potential contribution of the stud to the field and to the pool of knowledge should clearly be indicated in this portion.> <It also describes the contribution of the research to the discovery of information and knowledge.> <This section should clearly illuminate its contribution to the gap of knowledge as indicated from the introduction.> <Hierarchical arrangement should be observed in the listing the different sub-groups who will be benefited from the study.>
Methods	Research Design

<It indicates the kind of research to be used for this study (Qualitative, quantitative, experimental, and descriptive or the like).>

<Explain the design defining the research design to be utilized and its applicability in the present investigation.>

Participants/ Respondents

<Must include and explain specifically the sources of data.>

<Include the sampling technique to be used to allocate the number of respondents and explain its applicability to the investigation.>

<Specify the rationale of selecting the sampling technique to be used in the study.>

Data Gathering Tool

<This will show the tool to be used in gathering the data from the respondents.>

<Describe specifically the tool, the parts and the manner it will be answered or to be used.>

<Explain the source of the data gathering tool.>

<Describe in specific the methods of developing the tool, the reliability and validly test and their corresponding interpretation.>

<For experimentation, specification of the materials to be used in the experiment is needed.>

Data Gathering Procedure

<This portion specifically discusses the details of the procedures, strategies employed by the researcher/s to gather the data from the respondents.>

<Detailed discussion of the processes involve in data gathering is required to enable readers and other researchers to replicate the procedures or methods you did.>

Data Analysis/ Statistical Treatment of Data

<The statistical treatment of data is to be presented in this portion for quantitative research. The researchers should include the discussion of the tool to be used and its specific used in answering the statement of the problem.>

<For qualitative study, explain the analysis of data to be used for the qualitative data from the respondents.>

<Statistical Formula is not anymore included from this chapter.>

<Separate introductory paragraph to introduce this chapter in necessary.>

Data gathering tool should also be included in a separate sheet
